Information and tips on maintaining the beauty and function of your WOLF Classic Cabinets.
Like all investments in your home, your cabinetry will age and begin to look worn if not properly maintained. Please be sure to regularly clean and care for your cabinetry using the guidelines below.

CABINET SURFACES
The interiors and exposed sides of your cabinetry are finished with a vinyl laminate material meant to help resist rub marks and contain minor spills. The doors and face frames of your cabinetry are manufactured with a quality finish meant to protect and maintain the beauty of the wood. To keep your cabinets looking their best we encourage you to clean them monthly.

CABINET CARE
- Wipe up spills, splatters and water spots as they occur - keep the cabinets dry.
- Clean as needed with a soft, lint free cloth. Use a mild detergent or soap and warm water.
- Use a fresh cloth when wiping down cabinets. Even when thoroughly rinsed, cleaning cloths may still have remnants of bleach, detergents, grease, and other materials which can be harmful to the finish of your cabinetry.
- Avoid using a dishcloth or sponge which may have remnants of detergents and grease on them.
- Dry surfaces immediately with a soft cloth.
- Never use bleach, ammonia, or any cleaning agents that contain any abrasives.
- Never use scouring pads, steel wool or powdered cleaners.
- Avoid using oven cleaners to come in contact with wood finishes.
- Avoid placing small kitchen appliances where heat is directed onto cabinet surfaces.
- Avoid draping damp clothes or dishtowels over cabinet doors – excessive moisture can cause permanent damage.

EXTERIOR FINISH
- The finish on your cabinetry does not require waxing or the application of “wood oils” to maintain the wood. However if you desire a glossy or shiny appearance, you may apply furniture polish or lemon oil that is recommended for furniture use.
- Before applying polish to your cabinets, be sure they are thoroughly cleaned and dry.
- Be sure not to use any cleaning compounds that may contain alkaline agents, which can negatively impact furniture surfaces.
- If not thoroughly wiped clean these polishes and oils can create either a hazy look or act as attractant to dust and dirt.
- Painting in the same room as your cabinetry? We recommend Scotch brand painters tape style 600 or 610 when preparing to paint around your WOLF Classic Cabinetry.
We are confident that you will be pleased with your purchase of WOLF Classic Cabinets. Because your complete satisfaction is important to us, we want you to understand the unique characteristics of the wood species, finishes and processes we use as it relates to finished product appearance. If you have any questions please contact your salesperson for further explanation.

**CHARACTERISTICS OF MAPLE WOOD:**

- Naturally occurring wood characteristics such as variations in color, grain, mineral streaks and knots are not considered defects. Color variations are a natural occurrence due to species, age, character of cabinets, and exposure to UV light and sunlight. Such variations and changes are not considered defects. For these reasons, new and/or replacement cabinets may not match display samples and/or existing cabinets.

- These natural characteristics may also visibly show through the cabinet finish by way of grain, worm holes, knots and so forth. This is not considered a defect.

- Warping is the bending or twisting of a part due to moisture and atmospheric changes. To measure a door or shelf, lay the product on a flat surface and measure the gap from the surface to the part. The standard allowable tolerance for wood is 1/8” per lineal foot. Materials that fall within specification are considered acceptable, as a part of the natural characteristics of wood.

**PAINT FINISHES:**

- Paint finishes are uniquely different from stained wood finishes. On all wood products, expansion and contraction are typical due to changes in climate conditions. Due to the normal movement, paint finishes may develop separation lines, finish breaks and seam lines. These will be most notable at stile, rail and panel joints. Joint separations may become more noticeable over time and through season changes. With use of select hardwoods and veneers, some of the grain pattern and wood characteristics (checks, pin knots) as well as seams and joints will remain visible through the paint finish. These are normal and are not considered quality defects. Seam lines and finish breaks are normal characteristics of paint finishes and should not be considered a reason for product replacement. Over time, there may be a slight color shift due to exposure to natural and artificial light.

**JOINT FRACTURES:**

- Wood is in a constant state of expansion and contraction, therefore hairline fractures will soon be noticeable at the joints on the cabinet face frame. These will not weaken the finish, but they will be noticeable.

**MITER DOORS:**

- When mitered doors are painted with a solid color finish, the joints of the miter door will appear as the wood expands and contracts due to normal environmental changes.

**GLAZING:**

- The glazing process is a custom hand applied technique that will vary between individual cabinet doors, and will not look exactly the same on every door. Differences in thickness, darkness, and consistency are to be expected with this hand applied finish and are not considered to be a defect.

**WOOD SHRINKAGE:**

- Moisture content varies by wood species. Dry climate conditions can cause wood to shrink. Once the cabinets acclimate, the stain, glaze, or final finish may need to be touched up. If not thoroughly wiped clean these polishes and oils can create either a hazy look or act as attractant to dust and dirt.
Your cabinet installer will make the necessary adjustments when completing your project. However, like most elements of your home, your cabinetry will require some minor adjustments to maintain optimal performance. Door and drawer adjustments are common — and simple — for any homeowner to perform. **NOTE:** Always use a standard screw driver for adjustments. Using an electric screw gun may cause serious damage to your cabinetry.

**COMMON ADJUSTMENTS**

**DOOR ADJUSTMENTS**

The six-way adjustable hinges used on our cabinetry are durable and meant to last for years. However, periodic adjustments may be needed to tighten screws and adjust doors for level.

The hinges on all of our door styles adjust the same way, however the Dartmouth, Circa & Hudson doors have a soft close adapter which attaches to one hinge, and must be removed prior to hinge adjustment. Please see REMOVAL & ADJUSTMENT OF SOFT CLOSE DOOR ADAPTERS before proceeding.

**Tightening the hinge**

From repeated opening and closing, it might be necessary to tighten **Screw 1** which attaches the door to the frame of the cabinet.

**Adjusting doors for level/plumb**

To raise or lower your door simply loosen **screw 1 on all hinges attached to that door**, and manually raise the door up or down to the desired height. Tightening the screw will set the door in place.

To adjust the door forward or backward adjust **screw 2**. Turning the screw clockwise will move the door back, closer to the cabinet frame. Turning the screw counter clockwise will extend the door away from the cabinet frame.

To adjust the door left or right, loosen **screw 3**. Turning the screw clockwise will adjust the door to the left. Turning the screw counter clockwise will adjust the door to the right.
**NOTE:** Always use a standard screw driver for adjustments.

Using an electric screw gun may cause serious damage to your cabinetry.

---

**REMOVAL & ADJUSTMENT OF SOFT CLOSE DOOR ADAPTERS**

Every door of the Dartmouth, Circa, and Hudson styles of WOLF Classic Cabinetry will come with a soft close adapter attached. Regardless of size each door has one adapter.

To remove the adapter, place your finger at the back of the adapter where you will feel a spring loader latch. See image 2 and image 3. Pull the latch toward you. You will feel the latch release and the soft close adapter will come free.

To Reinstall, insert the soft close adapter onto the front of the hinge first, then press the back of the adapter onto the back latch. To help the adapter attach more easily you can hold open the spring loaded latch. See image 4.

To adjust how fast/slow your doors open and close, twist the plastic attachment at the back of the mechanism to add/remove tension. See image 5.
DRAWER ADJUSTMENTS

Due to normal shipping, handling and delivery it is common for drawers to require on site adjustments.

Common adjustments include assuring that the drawers are square, plumb, and align with adjacent cabinets.

DRAWER HEAD ADJUSTMENTS

Use these instructions for Saginaw or adjustments of Dartmouth, Circa or Hudson that can’t be handled by adjusting the drawer glides as outlined on page 4.

1. Remove the drawer box from the cabinet
2. Loosen, but do not fully remove, either the left or right screw on the back of the drawer head. See image 2.
3. With the screw loosened, adjust your drawer head to be fully plumb and level.
4. Once the drawer head is set to your liking tighten the screw back into the drawer head, taking note to not allow the screw to follow the previous hole in the drawer head.

ADJUSTMENT FOR UNDERMOUNT DRAWER GLIDES

1. Remove drawer from track by fully opening the drawer
2. Then reach under the cabinet and squeeze in the locking latches, and remove the drawer from the track. See image 2.
3. To adjust the drawer for level, use the adjustment levers on both the left and right side. To raise the drawer head twist the adjustment lever clock wise. To lower the drawer head twist counter clock wise. See image 3.
4. Re-insert the drawer onto the tracks, being certain that the rear pin is fully inserted in the hole drilled in the rear of the drawer box and that the glides fully lock into the latches. See image 4.
WOLF Classic Cabinets Five-Year Limited Warranty

WOLF Classic Cabinets have been manufactured under the highest standards of quality and workmanship.

FIVE-Year Limited Warranty on Cabinets, Drawer Guides and Hinges

WOLF warrants to original consumer purchasers for five years from date of original purchase that cabinets, drawer, drawer guides and hinges used in the manufacture of WOLF Classic Cabinets shall be free from defects in material and workmanship under normal use.

General Warranty Guidelines

Should WOLF Classic Cabinets fail during the applicable warranty period due to defects in the material or workmanship under normal use, WOLF, in its discretion, will repair or provide the parts necessary to replace the defective products.

This warranty is only applicable to products used in residential applications in the United States and is not transferable.

This warranty does not cover products that are misused, abused, mishandled, improperly installed, improperly stored, changed, modified or subject to extreme temperatures or extreme moisture levels, or normal wear and tear. This warranty is not valid for products used for any purpose other than the purpose for which they were originally intended. This warranty does not cover the cost of installation, removal, subsequent damage or transportation of the defective product, regardless of whether the work was performed by a contractor, service company or the consumer.

Variations in color and grain pattern are a natural characteristic of wood. Color changes also may result from exposure to light, heat, smoke, household cleaners, and other elements and environmental conditions that are part of the aging process. These material variations and changes are not covered by this warranty. WOLF reserves the right to substitute discontinued product with the most similar product in styling, wood species and color available at the time a claim is submitted.

Paint finishes are uniquely different from standard wood finishes. On all wood products, expansion and contraction are typical due to changes in climate conditions. Due to this normal movement, paint finishes may develop slight separation lines, finish breaks and seam lines. With use of selected hardwoods and veneers, some grain pattern and wood characteristics (checks, pin knots) as well as seams and joints will remain visible through the paint finish. Over time, there may be a slight color shift, due to exposure to natural and artificial light. These normal conditions are not considered quality defects and are not covered by this warranty.

THIS WARRANTY IS THE EXCLUSIVE WARRANTY OF WOLF AND IS IN LIEU OF AND WOLF DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights that vary from state to state.

To submit a claim under this warranty, contact your nearest WOLF Classic Cabinets dealer or send a letter explaining the defect along with photos and a dated sales receipt as proof of purchase to the address below.
